Energy audit at WWF

The World Wildlife Fund's mission is to stop degradation of the planet's natural environment and to build a future in which humans live in harmony with nature.

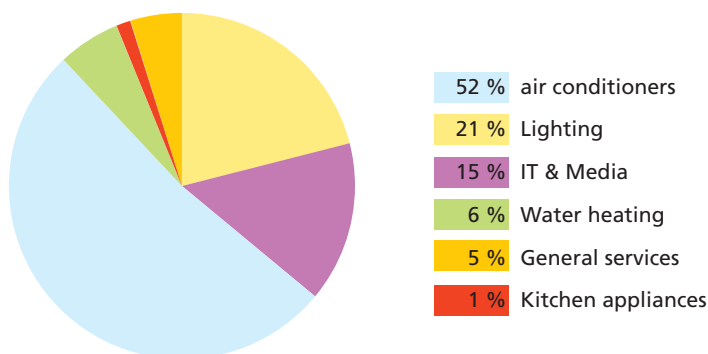

In order to act on their mission statement by starting "at home" and "walking the talk", WWF commissioned Power Solutions to conduct an energy audit at the Millennium Park office building to investigate current use of energy and energy efficiency practices. Part of the process will involve identifying the potential for generating electricity from renewable resources.

Power Solutions conducted an energy audit at the Millennium Park offices, assessing overall electricity consumption and analysing where most energy was being consumed.

Energy savings opportunities were identified to be in the order of 15% to 30%. These were compiled into an action plan for implementation.
